November 18, 2018

## 1 Introduction

- Project title and introduce thyself

## 2 Literature review

- Describe some points of chosen papers (How to parallelize layers of CNN)
- Some previous technique discussion (Data parallelism, model parallelism etc.)
- Brief analysis of previous work (Analyze specifically model parallelism technique)

## 3 Project Discussion

- CNN and it's evolution
- Basic Python and Tensorflow introduction
- How CNN is integrated to the project
- Algorithm
- Runtime analysis of the algorithm
- Limitation

## 4 Parallelism

- Basic idea of parallelism [simple vectorAdd example in Python]
- Overview of cuDNN[cuda library]
- How cuDNN integrates to the project

## **5 Experiment**

- Implementation of the project
- Analysis of result
- Comparison with other papers[it can be changed depending on results]

## **6 Application**

- Motivation
- Possible application of the work
- Future work

## **7 Discussion**

- Ask question 1
- Ask question 2
- Ask question 3
